Low Ph Beer Line Cleaner

IMPORTANT LEGAL NOTICE: The information in this communication is provided in good faith and is believed to be reliable as at the date of the communication. However, Lion Nathan makes no representation that the information in this communication is complete or accurate for your specific purposes and you should not rely on this communication for information about what brand(s) of beer line cleaning systems and cleaning agents you should use AND how you should use them. For all questions about these matters you should refer to your chosen supplier. Accordingly, to the extent permitted by law, Lion Nathan Australia Pty Limited and its related bodies corporate do not make any representation or warranty of reliability, completeness, fitness for purpose or accuracy of the information in this communication.

Lion Nathan is searching continuously for innovations that make the workplace where tap beer is poured safer.

Lion Nathan has become aware of a commercially available **Low pH** beer line cleaner which is significantly less injurious to health if contact is made. Subsequently, Lion Nathan have rigorously tested the product under field conditions and found it to be as effective as the high pH beer line cleaner currently used in all aspects of the cleaning process.

Consequently Lion Nathan would like to make the industry aware of this products availability. We suggest you contact your current supplier or beer systems representative for the availability of such a product.

Why?

- High pH (caustic) beer line cleaner if it makes contact with a human both externally or internally will cause severe injury and can lead to death in certain circumstances.
- Because of this we have stringent handling procedures and systems that are designed to manage it correctly.
- Unfortunately, through ignorance and sheer stupidity we still get cases of people being burnt or ingesting the product.
- A low Ph product has a much reduced impact on health if contact is made.

If you have any queries please contact me direct or the applicable regional Beer Systems Manager.
